

For Research Use Only

IL-23 p19 Recombinant monoclonal antibody, PBS Only

Catalog Number: 85947-3-PBS

Basic Information

Catalog Number:	85947-3-PBS	GenBank Accession Number:	Purification Method:
Source:	Rabbit	GeneID (NCBI):	Protein A purification
Isotype:	IgG	51561	CloneNo.:
Immunogen Catalog Number:	HZ-1254	UNIPROT ID:	252904G4
		Q9NPF7	
		Full Name:	
		interleukin 23, alpha subunit p19	
		Observed MW:	
		21 kDa	

Applications

Tested Applications:
WB, Indirect ELISA
Species Specificity:
human

Background Information

Interleukin 23 (IL-23) is a member of the IL12 cytokine family and composed of two subunits, IL12p40 and IL23p19. It is produced by antigen presenting cells and has been shown to promote the production and survival of a distinct lineage of T-cells called TH17 cells. A functional receptor for IL-23 (the IL-23 receptor) has been identified and is composed of IL-12R β 1 and IL-23R. IL-23 is expressed chiefly by the macrophages and DCs. The IL-23R is found on memory T cells, NKT cells, macrophages, DCs, and naive T cells upon activation by TGF- β and IL-6. The main biological effects of IL-23 identified initially consist of stimulation of antigen presentation by DCs, T cell differentiation to Th17 cells, and production of interferon- γ (IFN- γ). IL-23 acts also as an end-stage effector cytokine through direct action on macrophages.

Storage

Storage:
Store at -80°C.
The product is shipped with ice packs. Upon receipt, store it immediately at -80°C
Storage Buffer:
PBS only, pH7.3

This product is exclusively available under Proteintech Group brand and is not available to purchase from any other manufacturer.

Selected Validation Data

PMA, LPS and Brefeldin A treated THP-1 cells were subjected to SDS PAGE followed by western blot with 85947-3-RR (IL-23 p19 antibody) at dilution of 1:5000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 85947-3-PBS in a different storage buffer formulation.
