Background Information

Cyclophilin E (CypE), also known as Cyclophilin-33, Rotamase E, CYP33, PPIE, is an enzyme which belongs to the cyclophilin-type PPIase family of PPIase E subfamily (PMID: 15998457). Cyclophilin E negatively regulates influenza virus replication and transcription occurs by impairing the formation of the vRNP (PMID: 21887220). Additionally, Cyclophilin E plays an important role in osteoblast differentiation as a positive regulator by increasing the transcriptional activity of Runx2 (PMID: 37947627).

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 85952-1-RR (Cyclophilin E antibody) at dilution of 1:5000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 85952-1-PBS in a different storage buffer formulation.

Biolayer interferometry (BLI) kinetic assays of 85952-1-RR against Human Cyclophilin E were performed. The affinity constant is 58.2 nM.
