## CHD8 Recombinant antibody

Catalog Number:86032-1-RR

Basic Information	Catalog Number: 86032-1-RR	GenBank Accession Number: NM_001170629	Purification Method: Protein A purification	
	Concentration: 1000 µg/ml	GenelD (NCBI): 57680	CloneNo.: 250612C4	
	Source: Rabbit Isotype: IgG Immunogen Catalog Number: AG31425	UNIPROT ID: Q9HCK8	Recommended Dilutions: WB: 1:5000-1:50000	
		Full Name: IF/ICC: 1:500-1:2000 chromodomain helicase DNA binding protein 8		
		Calculated MW: 290KD	IMW: MW:	
		Observed MW: 290 kDa		
Applications	Tested Applications:	ions: Positive Controls:		
	Species Specificity: human, mouse, rat	WB : HeLa 293 cells,	IeLa cells, Jurkat cells, mouse brain tissue, HEK- ells, MCF-7 cells, rat brain tissue C : HeLa cells,	
		IF/ICC : H		
Background Information	Chromodomain helicase domain 8 (CHD8) is one of the most frequently mutated and most penetrant genes in the autism spectrum disorder (ASD). CHD8 is located on 14q11.2. It is part of the SNF2H-like ATP-dependent chromatin remodeling enzymes family referred to as CHD (chromodomain helicase DNA binding). CHD8 has two isoforms: CHD8L, a full-length protein of 280 kDa; and CHD8S (Duplin), a 110 kDa protein of the NH2-terminal chromodomain region resulting from alternative splicing (PMID:19151705). CHD8 is essential for development, as homozygote mutant mice die at an embryonic stage. CHD8 is expressed in the mouse at the embryonic stage (E12.5) in different levels in wide regions of the brain (neocortex, forebrain, ventricular, subventricular and mantle zones, rhombic lip (RL), and the isthmus of the cerebellum, as well as in lower RL and floor plate region of the hindbrain, midbrain, diencephalon, hypothalamus, pituitary gland, craniofacial region, and tongue and olfactory epithelium). In the postnatal mouse brain (P20), CHD8 is expressed in the cerebellum, neocortex, hippocampus, hypothalamus, and olfactory bulb (PMID:30277262). Peak expression levels were observed at E18-P7, then gradually decreased to adulthood. Highest expression was found in neurons, and lower levels in astrocyte and astroglia (PMID:30574290). In the mouse, CHD8 is expressed higher in brain compared to other tissues and in the embryo, compared to adult.			
Storage	Storage: Store at -20°C. Stable for one year after shipment. Storage Buffer: PBS with 0.02% sodium azide and 50% glycerol, pH7.3 Aliguoting is unnecessary for -20°C storage

This product is exclusively available under Proteintech Group brand and is not available to purchase from any other manufacturer.

## Selected Validation Data

for 1.5 hours.

HeLa cells were subjected to SDS PAGE followed by western blot with 86032-1-RR (CHD8 antibody) at dilution of 1:20000 incubated at room temperature

mouse brain tissue were subjected to SDS PAGE followed by western blot with 86032-1-RR (CHD8 antibody) at dilution of 1:20000 incubated at room temperature for 1.5 hours.

Various lysates were subjected to SDS PAGE followed by western blot with 86032-1-RR (CHD8 antibody) at dilution of 1:20000 incubated at room temperature for 1.5 hours.

Immunofluorescent analysis of (4% PFA) fixed HeLa cells using CHD8 antibody (86032-1-RR, Clone: 250612C4) at dilution of 1:1000 and CoraLite®488-Conjugated Goat Anti-Rabbit IgG(H+L) (SA00013-2), CL594-Phalloidin (red).
