Background Information

RTCB (also known as HSPC117, C22orf28, FAAP and D10Wsu52e) is an essential subunit of a tRNA ligase complex that is involved in RNA repair and stress-induced splicing. As a multifunctional protein, RTCB is also a cell adhesion protein and is important in embryo and placenta development. Recently RTCB has been identified as UPR RNA ligase catalyzing unconventional XBP1 mRNA splicing. This antibody specifically recognizes endogenous RTCB protein. (25087875)

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 86258-5-RR (C22orf28 antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 86258-5-PBS in a different storage buffer formulation.

Biolayer interferometry (BLI) kinetic assays of 86258-5-RR against Human RTCB were performed. The affinity constant is below 1 pM.
