## Background Information

KRT86 is a gene that encodes the keratin protein Keratin 86, a member of the type II keratin family. Keratins are fibrous structural proteins critical for the integrity of epithelial cells, particularly in tissues like hair, nails, and skin. As part of the hair-specific keratin network, KRT86 plays a vital role in hair shaft formation and stability.

## Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 86357-1-RR (KRT86 antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 86357-1-PBS in a different storage buffer formulation.
