Background Information

RAB34, a Rab protein family member, is involved in repositioning of lysosomes, activation of micropinocytosis, and protein transport. RAB34 is aberrantly expressed in various cancers and exhibits oncogenic properties. Recently, Rab34 is identified as a ciliary protein. Rab34 is required for internal assembly of cilia but not for cilia built on the cell surface.

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 86839-3-RR (RAB34 antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 86839-3-PBS in a different storage buffer formulation.
