Background Information

ABCD3 belongs to the superfamily of ATP-binding cassette (ABC) transporters and is a peroxisomal membrane transporter involved in the transport of branched-chain fatty acids and C27 bile acids into the peroxisome. ABCD3 plays a role in the regulation of LCFAs and energy metabolism, namely in the degradation and biosynthesis of fatty acids via beta-oxidation (PMID: 24333844). Mutations in ABCD3 are associated with congenital bile acid synthesis defect 5 (CBAS5)(PMID: 25168382).
