## Background Information

PDE1A (Calcium/calmodulin-dependent 3',5'-cyclic nucleotide phosphodiesterase 1A) is also named as Cam-PDE 1A, 61 kDa Cam-PDE, hCam-1 and belongs to the cyclic nucleotide phosphodiesterase (PDEs) family. The PDEs play a role in signal transduction by regulating intracellular cyclic nucleotide concentrations through hydrolysis of cAMP and/or cGMP to their respective nucleoside 5-prime monophosphates. This protein has 9 isoforms produced by alternative splicing with the molecular weight from 57 kDa to 63 kDa. There is a report showing the major 67-kD PDE1A isoform identified in human sperm associates tightly with calmodulin and is not activated by Ca(2+)/calmodulin (PMID:12135876).

## Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 87154-1-RR (PDE1A antibody) at dilution of 1:4000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 87154-1-PBS in a different storage buffer formulation.

Biolayer interferometry (BLI) kinetic assays of 87154-1-RR against Human PDE1A were performed. The affinity constant is below 1 pM.
