Background Information

NADH: ubiquinone oxidoreductase core subunit S8 (NDUFS8), also called TYKY, is an essential core subunit and component of the iron-sulfur (FeS) fragment of mitochondrial complex I directly involved in the electron transfer process and energy metabolism (PMID: 36557887). Pathogenic variants of the NDUFS8 are relevant to infantile-onset and severe diseases, including Leigh syndrome, cancer, and diabetes mellitus (PMID: 36557887). Knockdown of NDUFS8 impaired mitochondrial function, increased ROS, disrupted redox homeostasis, induced apoptosis, and suppressed proliferation and migration of HCC cells (PMID: 40914145).

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 87156-1-RR (NDUFS8 antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 87156-1-PBS in a different storage buffer formulation.

Immunohistochemical analysis of paraffin-embedded mouse heart tissue slide using 87156-1-RR (NDUFS8 antibody) at dilution of 1:1000 (under 10x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0). This data was developed using the same antibody clone with 87156-1-PBS in a different storage buffer formulation.

Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0). This data was developed using the same antibody clone with 87156-1-PBS in a different storage buffer formulation.

Immunofluorescent analysis of (4% PFA) fixed HeLa cells using NDUFS8 antibody (87156-1-RR, Clone: 252267D5) at dilution of 1:500 and Coralite® 488-Conjugated Goat Anti-Rabbit IgG(H+L) (SA00013-2). This data was developed using the same antibody clone with 87156-1-PBS in a different storage buffer formulation.

Bi-layer interferometry (BLI) kinetic assays of 87156-1-RR against Human NDUFS8 were performed. The affinity constant is below 1 pM.
