Background Information

Plasmalemma vesicle-associated protein (PLVAP) is an endothelial-associated protein that is involved in endothelial diaphragm formation and maintenance of basal vascular permeability. At the same time, PLVAP has roles in immunity by facilitating leukocyte diapedesis at inflammatory sites and controlling peripheral lymph node morphogenesis and the entry into soluble ags into lymph node conduits. Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 87712-1-RR (PLVAP antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 87712-1-PBS in a different storage buffer formulation.

Immunohistochemical analysis of paraffin-embedded mouse colon tissue slide using 87712-1-RR (PLVAP antibody) at dilution of 1:2000 (under 40x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0). This data was developed using the same antibody clone with 87712-1-PBS in a different storage buffer formulation.
