Background Information

PLAC8, also named as Protein C15, is a placenta-specific protein. The expression was downregulated upon activation, particularly in dendritic cells generated in vitro from CD34 (142230) progenitor cells. PLAC8 is specifically expressed in the interstitial extravillous trophoblast cells on the fetomaternal interface, while its expression is hardly detectable in the endovascular trophoblast cells. The MW of PLAC8 is about 12-20 kDa.

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 87918-1-RR (PLAC8 antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 87918-1-PBS in a different storage buffer formulation.
