## For Research Use Only

## SARS-CoV-2 Spike Recombinant antibody

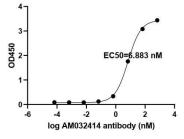

Catalog Number:91359-PTG

## www.ptglab.com

Basic Information	Catalog Number: 91359-PTG Size: Source: Human Isotype: IgG1	GenBank Accession Number: NC_045512 GeneID (NCBI): 43740568 UNIPROT ID: PODTC2 Full Name: SARS-CoV-2 Spike Protein Calculated MW: 141 kDa	Purification Method: Protein A Chromatography CloneNo.: AM032414 Recommended Dilutions: Sample dependent. To be determined by the end user.
Applications	Tested Applications: ELISA Species Specificity: Virus		
Background Information	COVID-19, which is short for coronavirus disease 2019, is the official name of the respiratory disease caused by infection with the novel coronavirus SARS-CoV-2. The virus that causes COVID-19 was named SARS-CoV-2 because it is a coronavirus genetically similar to, yet distinct from, the virus that caused the severe acute respiratory syndrome (SARS) outbreak in 2003. Studying the details of how this virus replicates and causes the disease will allow scientists and physicians to more rapidly develop fast and accurate methods of detection as well as to deploy therapeutic and vaccine strategies. This antibody was derived from COVID-19 patients who have cleared the virus. Patient serum IgG was sequenced and expressed as full-length IgG1 with human immunoglobulin heavy and light chains in mammalian 293 cells.		
Storage	years. Keep all reagents on ice when Storage Buffer:	32mM NaOAc, 0.035% sodium azide, a	eed for 12 months from date of receipt.

## Selected Validation Data

SARS-CoV-2 Spike Antibody (clone AM032414) tested by ELISA.SARS-CoV-2 Spike RBD protein was coated onto microtiter plates at 0.5 µg/mL and then incubated with a dilution series of SARS-CoV-2 Spike Antibody (clone AM009105). Bound antibodies were detected with anti-human IgG conjugated to horseradish peroxidase (HRP) followed by incubation with HRP Substrate and then measuring the resulting absorbance at 450 nm. Data provided by Active Motif®..
