## Background Information

The tumour necrosis factor ligand superfamily member 4 gene (TNFSF4, OX40L), which encodes for the T cell costimulatory molecule OX40 ligand, has been identified as a susceptibility gene for the development of systemic lupus erythematosus (SLE). OX40L/TNFSF4/CD252 is a co-stimulatory checkpoint protein expressed by several types of immune and non-immune cells (PMID: 15750594, 19778912). TNFSF4 mRNA is expressed in melanoma cell lines and melanoma samples, including those with low lymphocytic infiltrates, and is not associated with the ulceration status of the primary tumor (PMID: 31501955).

Selected Validation Data

1x10<sup>6</sup> untreated or Anti-IgM and CD40 treated BALB/c mouse splenocytes were surface stained with 0.25 ug Anti-Mouse OX40 Ligand/TNFSF4 Rabbit RecAb (98381-1-RR, Clone:242227B1) and PE-Conjugated Goat Anti-Rabbit IgG(H+L). Cells were then stained with CoraLite® Plus 488 Anti-Mouse CD19 (1D3) (CL488-65290, Clone: 1D3). Cells were not fixed. This data was developed using the same antibody clone with 98381-1-PBS in a different storage buffer formulation.
