

For Research Use Only

Anti-Human IgG1 Rabbit Recombinant Antibody, PBS Only

Catalog Number: 98804-3-PBS

Basic Information

Catalog Number:

98804-3-PBS

Concentration:

1mg, 3 mg/ml

Source:

Rabbit

Isotype:

IgG

Immunogen Catalog Number:

EG6672

GenBank Accession Number:

GeneID (NCBI):

3500

Full Name:

immunoglobulin heavy constant gamma 1 (G1m marker)

Purification Method:

Protein A purification

CloneNo.:

251296E10

Applications

Tested Applications:

IHC, FC

Species Specificity:

human

Background Information

Human Immunoglobulin G subclass 1 (IgG1) is the most abundant antibody subclass in human serum, constituting approximately 60-70% of total IgG. It serves as a critical mediator of the adaptive immune system's defense against pathogens. Human IgG1 represents a perfect balance of specificity, stability, and powerful immune-activating capacity. Its dominance in the biotherapeutic landscape is a testament to its versatility and effectiveness. This antibody does not recognize IgA2.

Storage

Storage:

Store at -80°C.

The product is shipped with ice packs. Upon receipt, store it immediately at -80°C

Storage Buffer:

PBS only, pH7.3

This product is exclusively available under Proteintech Group brand and is not available to purchase from any other manufacturer.

Selected Validation Data

Immunohistochemical analysis of paraffin-embedded human tonsillitis tissue slide using 98721-9-RR (Human IgG1 antibody) at dilution of 1:1000 (under 20x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0). This data was developed using the same antibody clone with 98804-3-PBS in a different storage buffer formulation.

1x10⁶ human PBMCs were stained with 0.25 ug Anti-Human Human IgG1 Rabbit RecAb (98804-3-RR, Clone: 251296E10) or 0.25 ug Rabbit IgG Isotype Control Recombinant Antibody (98136-1-RR, Clone: 240953C9), and PE-Conjugated Goat Anti-Rabbit IgG(H+L). Cells were then stained with CoraLite® Plus 647 Anti-Human CD19 (4G7) Mouse IgG2a Recombinant Antibody (CL647-65562, Clone: 4G7). The cells originate from CD11b-negative cells. Cells were incubated with FC
