Background Information

Programmed cell death ligand 1 (PD-L1, CD274, or B7-H1) is the first member of B7 family to be discovered. B7 family molecules are type I transmembrane proteins belonging to the immunoglobulin superfamily. In concert with their CD28 family receptors, the B7s are key regulators of the adaptive immune response. PD-L1 is suggested as a negative regulator of T and B cells, and plays an important role in mediating tolerance of lymphocytes to self-antigens. It is also involved in the costimulatory signal, essential for T-cell proliferation and production of IL-10 and IFN gamma, in an IL-2-dependent and a PD-1-independent manner.

Selected Validation Data

1x10⁶ untreated or anti-CD3/CD28 treated mouse splenocytes were surface stained with 0.1 ug APC Anti-Mouse PD-L1/CD274 Rabbit RecAb (APC-FcA98166, Clone: 240993E1). Cells were co-stained with FcZero-rAb™ PE Anti-Mouse CD3e. Cells were not fixed.
