Background Information

CD45, also known as protein tyrosine phosphatase, receptor type C, is a type I transmembrane protein expressed on the surface of all haematopoietic cells with the exception of erythrocytes and platelets (PMID: 3489673; 28615666). CD45 is a pan-haematopoietic cell marker and has been shown to be essential for T- and B-cell activation and signaling (PMID: 9429890; 16378097). CD45 exists as multiple isoforms due to alternative splicing of three exons (4, 5, and 6, designated A, B, and C) in the extracellular domain (PMID: 12414720). CD45RA is expressed on naïve T cells, B cells, and monocytes (PMID: 1830500; 14687231).

Selected Validation Data

1x10⁶ rat splenocytes were surface stained with 0.25 ug Biotin Anti-Rat CD45RA (OX-33) Rabbit RecAb (Biotin-FcA65578, Clone: OX-33) or 0.25 ug Isotype Control, and Streptavidin-PE Conjugate (PE-PF00030). Cells were co-stained with 0.25 ug FcZero-rAb® APC Anti-Rat CD4 Rabbit Recombinant Antibody (APC-FcA98252, Clone: 241955C11). Cells were not fixed.
