Background Information

CD68 is a type I transmembrane glycoprotein that is highly expressed by human monocytes and tissue macrophages. It belongs to the lysosomal/endosomal-associated membrane glycoprotein (LAMP) family and primarily localizes to lysosomes and endosomes with a smaller fraction circulating to the cell surface. CD68 is also a member of the scavenger receptor family. It may play a role in phagocytic activities of tissue macrophages.

Selected Validation Data

1X10⁶ human PBMCs were fixed and permeabilized with Transcription Factor Staining Buffer Kit (PF00011) then stained with 5 ul CoraLite® Plus 405 Anti-Human CD68 (CL405-65187, Clone:Y1/82A), or CoraLite® Plus 405 Mouse IgG2b Isotype Control. Monocytes were gated.
