For Research Use Only

CoraLite® Plus 405 Anti-Human ALCAM (3A6)

Catalog Number: CL405-65223

Basic Information

Catalog Number:

CL405-65223

100tests, 5 μ l/test

Source: Mouse

IgG1, kappa

Isotype:

Calculated MW: 105 kDa

molecule

BC057809

GeneID (NCBI):

UNIPROT ID:

Full Name:

Q13740

GenBank Accession Number:

activated leukocyte cell adhesion

Purification Method:

Affinity purification

CloneNo.:

Excitation/Emission maxima

wavelengths: 399 nm / 422 nm

Applications

Tested Applications:

Species Specificity:

Background Information

Activated leukocyte cell adhesion molecule (ALCAM, also known as CD166) is a cell adhesion molecule that belongs to the immunoglobulin superfamily. It is involved in cell-cell adhesion through homophilic and heterophilic (to CD6) interactions. ALCAM is widely expressed in a variety of normal tissues and cell types, including activated T cells and monocytes, epithelial cells, fibroblasts, neuronal cells, hepatocytes, and bone marrow mesenchymal stem cells (PMID: 7760007; 25221999). Altered ALCAM expression has been associated with the differentiation state and progression in some neoplasms including melanoma, prostate, colorectal, and breast cancers (PMID: 20461761; 18172759).

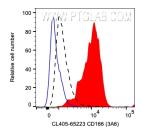

Storage

Storage:

Store at 2-8°C. Avoid exposure to light. Stable for one year after shipment.

PBS with 0.09% sodium azide and 0.5% BSA.

Selected Validation Data

1X10^6 PHA-treated (day 3) human PBMCs were surface stained with 5 ul CoraLite® Plus 405 Anti-Human ALCAM (CL405-65223, Clone:3A6) (red), or unstained (blue). The black dashed line indicates unactivated PBMCs surface stained with 5ul CoraLite® Plus 405 Anti-Human ALCAM. Cells were not fixed. Monocytes were gated.
