## **Background Information**

NUSAP1, also named as ANKT, belongs to the NUSAP family. It is microtubule-associated protein with the capacity  $to \ bundle \ and \ stabilize \ microtubules. \ NUSAP1\ may \ associate \ with \ chromosomes \ and \ promote \ the \ organization \ of \ an \ organization \ of \ an \ organization \ of \ organization \ organization$ mitotic spindle microtubules around them. NUSAP1 plays a role in connecting apoptosis with cell migration and it is a potentially involved in morphogenesis in vertebrates (PMID:21203972). NUSAP1 is an immunogenic antigen in 65% of patients with AML following allogeneic HCT and suggests a tumor antigen role(PMID:20053754). NuSAP1 protein level is tightly regulated by the APC/C ubiquitin ligase complex and NuSAP induces mitotic arrest dependent of its microtubule affinity (PMID:17618083). NUSAP1 is overexpressed in pituitary adenomas.
