Background Information

SKIL, also known as SnoN, is a mediator of the transforming growth factor- β (TGF- β) signaling pathway and exerts pro-oncogenic activity through inhibiting TGF- β /Smad pathway (PMID: 19114989). SKIL is involved in reduction of autophagy and subsequent tumor cell apoptosis in arsenic trioxide-treated promyelocytic leukemia and ovarian carcinoma. In addition, SKIL may regulate cell division or differentiation in response to extracellular signals.
