Background Information

Chromogranin A is a member of the granin family of neuroendocrine secretory proteins. It is located in secretory vesicles of neurons and endocrine cells. Chromogranin A is the precursor to several functional peptides including vasostatin, pancreastatin, catestatin and parastatin. These peptides negatively modulate the neuroendocrine function of the releasing cell (autocrine) or nearby cells (paracrine). CgA is one of the most used tumor markers in NET's (neuroendocrine tumors), and elevated CgA concentrations have been demonstrated in serum or plasma of patients with different types of these tumors.

Selected Validation Data

Immunofluorescent analysis of (-20°C Ethanol) fixed PC-12 cells using CoralLite® Plus 488 Chromogranin A antibody (CL488-60135, Clone: 3H11C11) at dilution of 1:200.

1×10^6 SH-SY5Y cells were intracellularly stained with 0.8 ug CoralLite® Plus 488 Anti-Human Chromogranin A (CL488-60135, Clone:3H11C11) (red), or 0.8 ug Control Antibody. Cells were fixed with 4% PFA and permeabilized with Flow Cytometry Perm Buffer (PF00011-C).
