Background Information

CD45, also known as protein tyrosine phosphatase, receptor type C, is a type I transmembrane protein expressed on the surface of all haematopoietic cells with the exception of erythrocytes and platelets (PMID: 3489673; 28615666). CD45 is a pan-haematopoietic cell marker and has been shown to be essential for T- and B-cell activation and signalling (PMID: 9429890; 16378097). CD45 exists as multiple isoforms due to alternative splicing of three exons (4, 5, and 6, designated A, B, and C) in the extracellular domain (PMID: 12414720). CD45RA is expressed on naïve T cells, B cells, and monocytes (PMID: 1830500; 14687231).

Selected Validation Data

1X10⁶ human PBMCs were surface co-stained with APC Anti-Human CD45RO and 5 ul CoraLite® Plus 488 Anti-Human CD45RA (CL488-65226, Clone: F8-11-13) or Mouse IgG1 Isotype Control. Cells were not fixed. Lymphocytes were gated.
