## For Research Use Only

## CoraLite® Plus 488-conjugated PHF10 Monoclonal antibody

Catalog Number: CL488-66341

Basic Information	Catalog Number: CL488-66341	GenBank Accession Number: BC020954	Purification Method: Protein G purification
	Size: 1000 µg/ml	GenelD (NCBI): 55274	CloneNo.: 4D4C6
	Source: Mouse	UNIPROT ID: Q8WUB8	Recommended Dilutions: IF/ICC 1:50-1:500
	lsotype: lgG1	Full Name: PHD finger protein 10	Excitation/Emission maxima wavelengths: 493 nm / 522 nm
	Immunogen Catalog Number: AG19096	Calculated MW: 408 aa, 46 kDa	
		Observed MW: 56 kDa, 35 kDa	
Applications	Tested Applications:	Positive Controls: IF/ICC : HEK-293 cells,	
	Species Specificity: human		
Background Informatic	PHF10, also named as BRG1-associated factor 45a, is a 498 amino acid protein, which locate in the nucleus and Belongs to the SAYP family. PHF10 Involve in transcription activity regulation by chromatin remodeling. It Belongs to the neural progenitors-specific chromatin remodeling complex (npBAF complex) and is required for the proliferation of neural progenitors. During neural development a switch from a stem/progenitor to a post-mitotic chromatin remodeling mechanism occurs as neurons exit the cell cycle and become committed to their adult state. The transition from proliferating neural stem/progenitor cells to post-mitotic neurons requires a switch in subunit composition of the npBAF and nBAF complexes. As neural progenitors exit mitosis and differentiate into neurons, npBAF complexes which contain ACTL6A/BAF53A and PHF10/BAF45A, are exchanged for homologous alternative ACTL6B/BAF53B and DPF1/BAF45B or DPF3/BAF45C subunits in neuron-specific complexes (nBAF). The npBAF complex is essential for the self-renewal/proliferative capacity of the multipotent neural stem cells. The nBAF complex along with CREST plays a role regulating the activity of genes essential for dendrite growth. PHF10 exists as several isoform and the calculated molecular weight of each isoform is 42 kDa, 37 kDa, 51 kDa, and 56 kDa.		
	The transition from proliferating r composition of the npBAF and nB/ npBAF complexes which contain / ACTL6B/BAF53B and DPF1/BAF45 complex is essential for the self-r complex along with CREST plays	neural stem/progenitor cells to post-m AF complexes. As neural progenitors e ACTL6A/BAF53A and PHF10/BAF45A, B or DPF3/BAF45C subunits in neuron enewal/proliferative capacity of the n a role regulating the activity of genes	itotic neurons requires a switch in subunit xit mitosis and differentiate into neurons, are exchanged for homologous alternative -specific complexes (nBAF). The npBAF nultipotent neural stem cells. The nBAF essential for dendrite growth. PHF10 exists

## Selected Validation Data

Immunofluorescent analysis of (4% PFA) fixed HEK-293 cells using CoraLite®@488 PHF 10 antibody (CL488-66341, Clone: 4D4C6) at dilution of 1:100.
