## **Background Information**

Epithelial cell adhesion molecule (EpCAM, CD326) is a type I transmembrane glycoprotein that functions as a homophilic, epithelial-specific intercellular cell-adhesion molecule. In addition to cell adhesion, EpCAM is also involved in cellular signaling, cell migration, proliferation, and differentiation. EpCAM is highly expressed on most carcinomas and therefore of potential use as a diagnostic and prognostic marker for a variety of carcinomas, and has become a therapeutic target. EpCAM may occur in distinct forms due to glycosylation. (PMID: 20837599; 19249674; 21576002; 22647938; 12691820)

## Selected Validation Data

1x10^6 HT-29 cells were surface stained with 0.4 ug CoraLite®555-conjugated EPCAM/CD326 Polyclonal antibody (CL555-21050) (red), or 0.4 ug Control Antibody (blue). Cells were not fixed.

Immunofluorescent analysis of (-20°C Methanol) fixed HT-29 cells using Coralite®555 EPCAM/CD326 antibody (CL555-21050) at dilution of 1:200.
