Background Information

The ADP-ribosylation factor (ARF) genes are small GTP-binding proteins of the RAS superfamily. ADP-ribosylation factor-like 2 (ARL2) is a member of a functionally distinct group of ARF-like genes. ARL2 interacts with the tubulin-specific chaperone protein known as cofactor D. ARL2 downregulates the tubulin GAP activity of cofactor C, D, and E, and inhibits the binding of D to native tubulin.
