Background Information

GOLGA2, also known as GM130, is a 130 kDa cis-Golgi matrix protein, one component of the detergent and salt-resistant Golgi matrix. It is a peripheral membrane protein highly bound to the Golgi membrane and localized mainly at the cytoplasmic face of the cis-Golgi membrane. Together with its interacting partner proteins, including p115, giantin, GRASP65, and Rab GTPase, GOLGA2/GM130 is involved in regulating ER-to-Golgi transport and maintaining the Golgi structure. Emerging evidence suggests that the GOLGA2/GM130 has potential roles in the control of glycosylation, cell cycle progression, and higher-order cell functions such as cell polarization and directed cell migration. Selected Validation Data

Immunofluorescent analysis of (4% PFA) fixed HepG2 cells using CoraLite®594 GOLGA2/GM130 antibody (CL594-11308) at dilution of 1:200.

1X10⁶ HepG2 cells were intracellularly stained with 0.2 ug CoraLite®594 Anti-Human GOLGA2/GM130 (CL594-11308) (red), or 0.2 ug Control Antibody. Cells were fixed with 4% PFA and permeabilized with Flow Cytometry Perm Buffer (PF00011-C).
