Background Information

Asialoglycoprotein receptor (ASGPR), also known as the hepatic galactose/N-acetylglucosamine (GlcNAc) receptor or Ashwell receptor, is a C-type lectin expressed exclusively in hepatic parenchymal cells. ASGPR consists of two subunits, a major subunit (ASGR1, HL-1) and a minor subunit (ASGR2, HL-2), and specifically recognizes terminal β $linked\ galactose\ or\ GlcNAc\ on\ circulating\ glycoproteins\ or\ cells.\ This\ receptor\ plays\ a\ critical\ role\ in\ serum$ $gly coprote in homeostasis\ by\ mediating\ the\ endocytosis\ and\ lyso somal\ degradation\ of\ gly coprote ins\ that\ contain$ terminal galactose or GlcNAc residues. ASGPR may facilitate hepatic infection by multiple viruses including hepatitis B, and is also a target for liver-specific drug delivery.
