Background Information

Stimulator of interferon genes (STING, also known as ERIS, MITA and MPYS, and encoded by TMEM173) is a transmembrane adaptor protein that facilitates innate immune signaling (PMID: 18724357). STING is widely expressed in various cell types such as endothelial cells, epithelial cells, T cells, macrophages, and dendritic cells (PMID: 26603901). It is predominantly located in the endoplasmic reticulum (ER). STING functions as a sensor of cytosolic DNA and promotes the production of type I interferons and pro-inflammatory cytokines.

Selected Validation Data

Immunofluorescent analysis of (4% PFA) fixed HT-29 cells using CoraLite@594 TMEM173/STING antibody (CL594-19851) at dilution of 1:200.

1X10⁶ THP-1 cells were intracellularly stained with 0.8 ug CoraLite@594 Anti-Human TMEM173/STING (CL594-19851) (red), or 0.8 ug Isotype Control. Cells were fixed with 4% PFA and permeabilized with Flow Cytometry Perm Buffer (PF00011-C).
