Background Information

BAT3 also known as Scythe or BAG6, is a nuclear protein implicated in the control of apoptosis and natural killer (NK) cell-dendritic cell (DC) interaction. BAT3 was first discovered as a member of a group of genes located within the class III region of the human major histocompatibility complex on chromosome 6, and has been extensively studied for its role in regulating apoptosis under various stress conditions such as DNA damage and endoplasmic reticulum-related stress. BAT3 has been shown to be required for p53 acetylation, which is critical for the enhancement of p53 transcriptional activity in response to DNA damage. In addition, BAT3 is involved in the regulation of development and reproduction of mammals by acting as a co-chaperone of the heat shock protein HSP70.

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with CL594-66661 (BAG6 antibody) at dilution of 1:1000 incubated at room temperature for 1.5 hours.

1X10⁶ HeLa cells were intracellularly stained with 0.4 ug CoraLite®594 Anti-Human BAG6 (CL594-66661, Clone:1B8D3) (red), or 0.4 ug Control Antibody. Cells were fixed with 4% PFA and permeabilized with Flow Cytometry Perm Buffer.
