**Background Information** 

The cell-surface molecule CD9, a member of the transmembrane-4 superfamily, interacts with the integrin family and other membrane proteins, and is postulated to participate in cell migration and adhesion. Expression of CD9 enhances membrane fusion between muscle cells and promotes viral infection in some cells (PMID:10459022). It is often used as a mesenchymal stem cell marker (PMID:18005405).

Storage

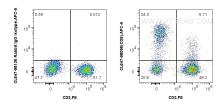

Storage:

Store at 2-8 °C. Avoid exposure to light. Stable for one year after shipment.

## **Selected Validation Data**

1x10^6 human PBMCs were surface stained with PE Anti-Human CD3 and 5 ul Coralite® Plus 647 Anti-Human CD9 Rabbit RecAb (CL647-98095, Clone:240830E6), or Coralite® Plus 647 Rabbit IgG Isotype Control RecAb (CL647-98136, Clone: 240953C9). Cells were incubated with FC Receptor Block prior to staining. Cells were not fixed.
