Background Information

Chemokine (C-C motif) ligand 3 (CCL3), also known as MIP-1 α , belongs to the family of chemokines. CCL3 has been found in the central nervous system and its cognate receptors, CCR1 and CCR5, have been reported to be expressed by astrocytes, microglia and neurons. CCL3 and its receptors, CCR1 and CCR5, also contribute to the $development\ of\ bone\ disease\ in\ multiple\ myeloma\ by\ supporting\ tumor\ growth\ and\ regulating\ osteoclast$ differentiation. CCL3 is also associated with the regulation of cell growth, angiogenesis, and metastasis of different tumors such as melanoma, renal cell carcinoma, and colorectal cancer. Moreover, CCL3 enhances cell migration and metastasis by up-regulating matrix metalloproteinase-2 (MMP)-2 expression in chondrosarcoma cells.
