| Background Information | CD8 is a transmembrane glycoprotein composed of two disulfide-linked chains. It can be present as a homodimer of CD8 $\alpha$ or as a heterodimer of CD8 $\alpha$ and CD8 $\beta$ (PMID: 3264320; 8253791). CD8 is found on most thymocytes. The majority of class I-restricted T cells express mostly the CD8 $\alpha$ $\beta$ heterodimer while CD8 $\alpha$ $\alpha$ homodimers alone have been found on some gut intraepithelial T cells, on some T cell receptor (TCR) $\gamma$ $\delta$ T cells and on K cells (PMID: 211591; 1831127; 8420975). CD8 acts as a co-receptor that binds to MHC class-I and participates in cytotoxic T cell activation (PMID: 8499079). During T cell development, CD8 is required for positive selection of CD4-/CD8+T cells (PMID: 1968084). |  |   |
| Storage                | Storage:<br>Store at 2-8°C. Avoid exposure to lig<br>Storage Buffer:<br>PBS with 0.09% sodium azide and 0  | rht. Stable for one year after shipment.<br>.5% BSA.               |   |

This product is exclusively available under Proteintech Group brand and is not available to purchase from any other manufacturer.

## Selected Validation Data

1X10^6 human PBMCs were surface co-stained with APC Anti-Human CD3 and 5 ul Cardinal Red™ Anti-Human CD8a (CR-65135, Clone:OKT8) or Mouse IgG2a Isotype Control. Cells were not fixed. Lymphocytes were gated.

1X10^6 human PBMCs were surface stained with 5 ul Cardinal Red<sup>™</sup> Anti-Human CD8a (CR-65135, Clone:OKT8) (red) or Mouse IgG2a Isotype Control. Cells were not fixed. Lymphocytes were gated.
