Background

VEGFA (vascular endothelial growth factor A) is a cytokine that is a member of the VEGF-A family. VEGF120 is an isoform of the VEGF-A gene produced by selective splicing, and is highly diffusible due to the lack of a heparin-binding domain. VEGF120 plays an important role in angiogenesis and the proliferation, migration, and survival of vascular endothelial cells. In addition, VEGF120 is essential for the formation of the cardiovascular system during embryonic development and is also involved in tissue repair and regeneration in the adult. In the nervous system, VEGF120 inhibits apoptosis of retinal neurons, showing its protective effect on nerve cells.
