## Background

BTN3A1, also named as Butyrophilin subfamily 3 member A1, BTF5 or CD277, is a 513 amino acid protein, which contains one B30.2/SPRY domain and two Ig-like V-type (immunoglobulin-like) domains. BTN3A1 is involved in immunomodulation and binds to various receptors such as the  $\gamma$   $\delta$  T cell receptor ( $\gamma$   $\delta$  TCR) and small molecules, fulfilling a wide range of functions including immunomodulation. BTN3A1 is also involved in the process of antigen presentation, influencing the recognition and response of immune cells to infections and tumors.
