Shipping:

The product is shipped at ambient temperature. Upon receipt, store it immediately at the recommended temperature.

Reconstitution

Briefly centrifuge the tube before opening. Reconstitute at 0.1-0.5 mg/mL in sterile water.

Background

TNFRSF11A, also known as receptor activator of NF- κ B (RANK), is a novel member of the TNF receptor family and was known to be a receptor for RANKL in T-cell and dendritic cell interaction. RANK is a type I homotrimeric transmembrane protein whose expression was initially detected only on osteoclast precursors (OCPs), mature osteoclasts, and dendritic cells. RANK activates several signaling pathways, such as NF- κ B, JNK, ERK, p38 α , and Akt/PKB. RANK signaling pathway is essential for differentiation, activation and survival of osteoclasts.
