For Research Use Only FlexAble 2.0 FITC Plus Antibody Labeling Kit for Rabbit IgG

Catalog Number: KFA508

产品介绍	Product name FlexAble 2.0 FITC Plus Antibody Labeling Kit for Rabbit IgG			
	Assay type	Antibody labeling		bitiga
	Tested applications	FC		
	Species Reactivity	Rabbit IgG		
	Antibody amount per labeling	0.5 µg antibody		
	reaction			
	Conjugate	FITC Plus		
	Excitation / Emission maxima wavelengths	495 nm/ 524	nm	
产品成分	Component	10 rxns	50 mms	200 rxns
	component		JUINIB	2001/115
	FITC Plus FlexLinker 2.0 for Rabbit IgG	10 µ L	50 µ L	200 µ L
	FlexQuencher for Rabbit IgG	20 µ L	100 µ L	400 μ L
	FlexBuffer	100 µ L	500 μL	2000 µL
包装规格	10/50/200 reactions			
保存条件	Store for 1 year at -20°C or for 6 months at +4°C upon re	ceipt. Avoid exposure	to light.	
其他	Q: What is the difference between FlexAble and FlexAble 2.0 products? A: FlexAble 2.0 has been improved to allow for more dyes per FlexLinker than the previous version of the kit.			
	A: riexable 2.0 has been improved to allow for more dyes per riexLinker than the previous version of the kit. This results in an increased signal per antibody.			
	0 1			
	Q: What are the FlexLinker, FlexQuencher and FlexBuffer?			
	A: The FlexLinker is a small polypeptide to which dyes are covalently conjugated that can label unconjugated			
	primary antibodies. The FlexQuencher is an Fc-containin The FlexBuffer is a PBS-based buffer.	g fragment that neut	ralizes the ex	cess FlexLinker.
	Q: What is the largest quantity I can label?			
	Q: What is the largest quantity I can label? A: With a standard kit size (50 reactions), you can label 2		r up to 50 dif	
	Q: What is the largest quantity I can label?		r up to 50 dif	
	Q: What is the largest quantity I can label? A: With a standard kit size (50 reactions), you can label 2	g approach.	r up to 50 dif	
	Q: What is the largest quantity I can label? A: With a standard kit size (50 reactions), you can label 2 You can easily scale up the antibody amount per labeling	g approach. ody that I can use?	·	ferent antibodies.
	Q: What is the largest quantity I can label? A: With a standard kit size (50 reactions), you can label 25 You can easily scale up the antibody amount per labeling Q: What is the lowest concentration of my primary antib	g approach. ody that I can use? /hich ends up at 0.07 r	·	ferent antibodies.
	Q: What is the largest quantity I can label? A: With a standard kit size (50 reactions), you can label 25 You can easily scale up the antibody amount per labeling Q: What is the lowest concentration of my primary antib A: Our protocol uses 0.5 μg of primary antibody in 7 μL, w your antibody is lower, you can also use a larger volume	g approach. ody that I can use? /hich ends up at 0.07 r than 7 μL.	ng/mL. If the	ferent antibodies.
	Q: What is the largest quantity I can label? A: With a standard kit size (50 reactions), you can label 2 You can easily scale up the antibody amount per labeling Q: What is the lowest concentration of my primary antib A: Our protocol uses 0.5 μg of primary antibody in 7 μL, w your antibody is lower, you can also use a larger volume Q: Can I label primary antibodies stored in BSA, glycerol,	g approach. ody that I can use? /hich ends up at 0.07 r than 7 μL. Tris buffer and/or pres	ng/mL. If the ervatives?	ferent antibodies. concentration of
	Q: What is the largest quantity I can label? A: With a standard kit size (50 reactions), you can label 2 You can easily scale up the antibody amount per labeling Q: What is the lowest concentration of my primary antib A: Our protocol uses 0.5 μg of primary antibody in 7 μL, w your antibody is lower, you can also use a larger volume Q: Can I label primary antibodies stored in BSA, glycerol, A: Yes, FlexAble Antibody Labeling Kits have been validat amine buffers, in any chosen concentration, interfere w	g approach. ody that I can use? /hich ends up at 0.07 r than 7 μL. Tris buffer and/or pres ed with carriers and a	ng/mL. If the ervatives? mine buffers	ferent antibodies. concentration of . Neither BSA nor
	Q: What is the largest quantity I can label? A: With a standard kit size (50 reactions), you can label 2 You can easily scale up the antibody amount per labeling Q: What is the lowest concentration of my primary antib A: Our protocol uses 0.5 μg of primary antibody in 7 μL, w your antibody is lower, you can also use a larger volume Q: Can I label primary antibodies stored in BSA, glycerol, A: Yes, FlexAble Antibody Labeling Kits have been validat	g approach. ody that I can use? /hich ends up at 0.07 r than 7 μL. Tris buffer and/or pres ed with carriers and a	ng/mL. If the ervatives? mine buffers	ferent antibodies. concentration of . Neither BSA nor
	Q: What is the largest quantity I can label? A: With a standard kit size (50 reactions), you can label 2 You can easily scale up the antibody amount per labeling Q: What is the lowest concentration of my primary antib A: Our protocol uses 0.5 μg of primary antibody in 7 μL, w your antibody is lower, you can also use a larger volume Q: Can I label primary antibodies stored in BSA, glycerol, A: Yes, FlexAble Antibody Labeling Kits have been validat amine buffers, in any chosen concentration, interfere w like sodium azide are also compatible with the kit.	g approach. ody that I can use? /hich ends up at 0.07 r than 7 μL. Tris buffer and/or pres red with carriers and a ith the labeling. 50%	ng/mL. If the ervatives? mine buffers	ferent antibodies. concentration of . Neither BSA nor
	Q: What is the largest quantity I can label? A: With a standard kit size (50 reactions), you can label 2 You can easily scale up the antibody amount per labeling Q: What is the lowest concentration of my primary antib A: Our protocol uses 0.5 μg of primary antibody in 7 μL, w your antibody is lower, you can also use a larger volume Q: Can I label primary antibodies stored in BSA, glycerol, A: Yes, FlexAble Antibody Labeling Kits have been validat amine buffers, in any chosen concentration, interfere w	g approach. ody that I can use? /hich ends up at 0.07 r than 7 μL. Tris buffer and/or pres red with carriers and a ith the labeling. 50% h one kit?	ng/mL. If the ervatives? mine buffers glycerol as w	ferent antibodies. concentration of . Neither BSA nor ell as preservative
	Q: What is the largest quantity I can label? A: With a standard kit size (50 reactions), you can label 2 You can easily scale up the antibody amount per labeling Q: What is the lowest concentration of my primary antib A: Our protocol uses 0.5 μg of primary antibody in 7 μL, w your antibody is lower, you can also use a larger volume Q: Can I label primary antibodies stored in BSA, glycerol, A: Yes, FlexAble Antibody Labeling Kits have been validat amine buffers, in any chosen concentration, interfere w like sodium azide are also compatible with the kit. Q: How many different primary antibodies can I label wit	g approach. ody that I can use? /hich ends up at 0.07 r than 7 μL. Tris buffer and/or pres red with carriers and a ith the labeling. 50% h one kit?	ng/mL. If the ervatives? mine buffers glycerol as w	ferent antibodies. concentration of . Neither BSA nor ell as preservative
	Q: What is the largest quantity I can label? A: With a standard kit size (50 reactions), you can label 25 You can easily scale up the antibody amount per labeling Q: What is the lowest concentration of my primary antib A: Our protocol uses 0.5 μg of primary antibody in 7 μL, w your antibody is lower, you can also use a larger volume Q: Can I label primary antibodies stored in BSA, glycerol, A: Yes, FlexAble Antibody Labeling Kits have been validat amine buffers, in any chosen concentration, interfere w like sodium azide are also compatible with the kit. Q: How many different primary antibodies can I label wit A: You can label up to 50 different antibodies with our Fl FlexAble 10 rxn Kit. Q: Will I observe cross-reactivity/leaking when I use two	g approach. ody that I can use? /hich ends up at 0.07 r than 7 μL. Tris buffer and/or pres red with carriers and a ith the labeling. 50% h one kit? exAble 50 rxn Kit, and	ng/mL. If the ervatives? mine buffers glycerol as w up to 10 anti	ferent antibodies. concentration of . Neither BSA nor ell as preservative bodies with our
