Background

Type II iodothyronine deiodinase (DIO2), belongs to the iodothyronine deiodinase family. DIO2 can activate thyroid hormone by converting the prohormone thyroxine (T4) by outer ring deiodination (ORD) to bioactive 3,3',5'-triiodothyronine (T3). DIO2 is thought to be responsible for the 'local' production of T3, and thus important in influencing thyroid hormone action in these tissues.

Synonyms

5DII, D2, DIO2, DIOII, ITDI2, SeLY, TXDI2, Type 2 DI, Type II 5 deiodinase
