## Background

NUPR1, also named as COM1 and P8, is a small nuclear protein that is responsive to various stress stimuli. NUPR1 can be induced by hypoxia, oxidative stress, while the expression is low in physiological condition. It is associated with chemoresistance in multiple malignancies. NUPR1 was also found in a complex with ANXA2, TRIM21, YBX1, S100A9, HSPA8, HSPA9, HSPA4, HSPA5, and ESR1, suggesting that these proteins might play a role in its functional regulation, and it can also form a complex with PADI4 and plays crucial functions in modulating DNA-repair, favoring metastasis, or facilitating citrullination of other proteins.

## Synonyms

Candidate of metastasis 1, COM1, nuclear protein 1, NUPR1, P8, Protein p8
