Background

The proteasome subunit, beta type 10 (PSMB10) gene regulated by interferon-gamma is a core part of the 26S proteasome complex, which is an important protein degrading system. Study identifies immunosubunit PSMB10 as a novel regulator that contributes to Ang II-induced atrial fibrillation (AF) and suggests that inhibition of PSMB10 may represent a potential therapeutic target for treating hypertensive AF.

Synonyms

beta2i, LMP10, Low molecular mass protein 10, Macropain subunit MECL1, MECL1, Proteasome MECL1, Proteasome subunit beta 2i, PSMB10
