Background

RAB11 has two isoform genes RAB11A(YL8) and RAB11B(YPT3), and belongs to the small GTPase superfamily and Rab family. It regulates endocytic recycling. RAB11 may exert its functions by interacting with multiple effector proteins in different complexes. It acts as a major regulator of membrane delivery during cytokinesis. RAB11 regulates the recycling of FCGRT (receptor of Fc region of monomeric Ig G) to basolateral membranes. Primary antibody in this kit recognizes both RAB11A and RAB11B.

Synonyms

RAB11, Rab 11, RAB11A, Ras related protein Rab 11A, Rab-11
