Background Information

Programmed cell death ligand 1 (PD-L1, CD274, or B7-H1), is the first member of B7 family to be discovered. B7 family molecules are type I transmembrane proteins belonging to the immunoglobulin superfamily. In concert with their CD28 family receptors, the B7s are key regulators of the adaptive immune response. PD-L1 is suggested as a negative regulator of T and B cell, and plays important role in mediating tolerance of lymphocytes to self-antigens. It is also involved in the costimulatory signal, essential for T-cell proliferation and production of IL10 and IFNG, in an IL2-dependent and a PD-1-independent manner.

Selected Validation Data

1x10⁶ PHA treated (3 days) human PBMCs were surface stained with CL750 Anti-Human CD3 and 5 ul PE Anti-Human PD-L1 (B7-H1) (PE-65081, Clone:29E.2A3) (red) or PE Mouse IgG2b Isotype Control (blue). 1x10⁶ untreated human PBMCs were surface stained with 5 ul PE Anti-Human PD-L1 (B7-H1) (PE-65081, Clone:29E.2A3) (black dashed). Cells were not fixed. Cells were treated with FC Receptor Block prior to staining. Lymphocytes were gated.
