Background Information	CD45, also known as protein tyrosine phosphatase, receptor type C, is a type I transmembrane protein expressed or the surface of all haematopoietic cells with the exception of erythrocytes and platelets (PMID: 3489673; 28615666) CD45 is a pan-haematopoietic cell marker and has been shown to be essential for T- and B-cell activation and signalling (PMID: 9429890; 16378097). CD45R (B220) is an isoform of CD45, expressed on murine B-lineage cells (except for plasma cells) and on a small sub-population of T cells (PMID: 6975314; 15712182). It is commonly used as a pan B-cell marker in mice. CD45R is also expressed on activated T cells and NK cell subsets (PMID: 7514808; 17923504). The RA3-6B2 clone reacts with human and mouse CD45R.
